

WILD HYDR GEN

LAST UPDATE: JANUARY 2025

ABOUT WILD HYDROGEN

www.wildhydrogen.com

Wild Hydrogen is leading the charge in the clean energy revolution with its patented, carbon-negative hydrogen and biomethane production technology.

Currently in its third seed round, aiming to raise £6 million - with £2.3 million already secured - Wild Hydrogen is accelerating the development of its 1 MW commercial demonstrator. Powered by the innovative Rising Pressure Reformer (RiPR) technology, wet biogenic materials are efficiently converted into biomethane, hydrogen, and biochar, all while capturing carbon dioxide.

Wild Hydrogen is creating a scalable, sustainable alternative to fossil fuels and paving the way for industry-wide decarbonisation.
